DETAILED ACTION

1. Claim 16 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 16 is indefinite because it depends upon itself. For the remainder of this office action it will be treated as if it depends from claim 13. There also is no proper antecedent basis for the phrase "the capacitive elements" in claim 16 on line 3 since claim 13 only recites "at least one capacitive element".

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 13 is rejected under 35 U.S.C. 102(b) as being anticipated by Roze in USSR Patent Document No. 135,744, published 16 June 2007. Roze discloses as shown in the figure a tool electrode and a workpiece electrode forming a gap, a voltage/current source symbolized by the symbols "+" and "-" in the figure and a capacitor in series with the voltage/current source and the machining gap. Clearly the capacitor will filter out DC components from the voltage/current source.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
6. Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Roze in view of Nordquist et al. in U.S. Patent No. 6,811,150. Nordquist et al. teaches having a workpiece mounted on a holder via an insulator. It would have been obvious to adapt Roze in view of Nordquist et al. to provide this to prevent dissipation of energy.
7. Claims 14,17-25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
8. Claim 16 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lin in U.S. Patent No. 6,525,287 discloses a power supply for charging and discharging a capacitor for electric discharge machining.
